# Motion graphics _"connection"_

In this rotation, I have learnt how to use After Effects to make motion graphics animation

As I was having a trouble with the Wi-Fi connection for the past few weeks, I decided to make a Vedic that is under a poor connection. The image you could see is blurry and you need to wait for it to load.

Storyboard

At first I was thinking of showing how the online class will be when the connection is bad, but it is hard to find a audio to suit it. So I decided to make a short Vedic and combine all the skills and techniques that I have learnt about After Effect to test if I have really understood them. It turns out to be quite well and I like how it is now.
